Question 7 – Mining program/Initial development plan

For coal mining lease – provide an initial development plan that complies with the legislation. Refer to development plan guide for more information.

For mineral mining lease (other than coal) - complete the mining program template with details of activities to be undertaken. A template is available online which you can complete and attach to this application, or complete all sections below.

7.1 When are operations expected to commence on this mining lease?

Within 6 months of Grant of the ML.

7.2 Is this mining lease being or to be operated in conjunction with other mining permits as part of a project? □ Yes □ No

If yes, provide details of the project including a description of the relationship of this lease to the project and why this lease is required for the project or operation of other permits.

This ML will have the same EA as other future ML tenements, and only one ML will be worked at any one time, and as for other permits not being worked at the same time as another, will be a reserve for future mining.

7.3 Describe the method of operations to be undertaken?

This statement must:

- Cover every mineral that the lease holder or applicant has (or will have) the right to mine.
- If the lease was granted for a purpose other than mining, cover the use of the mining lease for the purpose it was granted for.
- Describe the method in enough detail to support the size, shape eg overburden dumps, pits, stockpiles, processing etc.
- Provide adequate graphic representations (i.e. maps, photos, diagrams) of the resource and mining Information to support the proposed use.
- Include a description of infrastructure to constructed /maintained on the lease.
- Describe the methods proposed for rehabilitation works.
- Include a description of the workforce to establish/maintain this operation.

The operation is to be a very small scale one man mobile alluvial operation for tin and gold. There is hardly any overburden, and any wash from pits will be ongoing backfilling the mined pits after processing. Extra area that does not have mineralization is to be used for camp site, roads and small dams. I have been mining as a one man operation since 1997 and have had visits from Mines Inspectors and all were quite approval of how I was operating the small alluvial mine.

*If insufficient space, please use the mining program template available on the Departments website.*
