This plan forms part of the series of Environmental Values and Water Quality (EVPWQ) plans. It defines the Fitzroy Basin Groundwater Zone, which is part of the Queensland government's broader Environmental Protection (Water) Policy 2009.

The Fitzroy Basin Groundwater Zone is located within the Moreton Bay Region, highlighted in the map. The zone is defined by its boundaries, which are marked on the map. The plan includes information on groundwater chemistry zones, as indicated by the color-coded areas.

Key areas within the Fitzroy Basin Groundwater Zone include:
- **Upper Dawson - Injune area**: This area is marked with a distinctive color and is part of the larger zone.
- **Lower Nogoa Groundwaters**: Another significant area within the Fitzroy Basin Groundwater Zone.

The map also includes a legend that explains the symbols used to represent different features such as boundaries, catchments, and land use areas. The horizontal datum used is the Geocentric Datum of Australia 1994 (GDA94).

For more detailed information and specific zones within the Fitzroy Basin Groundwater Zone, refer to the plan documentation.
